

A world without wires

You shall not pass!

No more TVs, telephones.
All phone calls and video content
transmitted via Internet.

Hundreds of devices.
Everything communicates with
wireless, from cars to buildings to
the clothes we wear.

Driverless cars.
In-built GPS systems and
short-range wireless beams avoid
collisions.

How's your ride?
Never a jam.

Affordable telehealth.
Particularly in remote
areas where doctor
fly-ins are costly.

Virtual concierges.
Retailers track shopper locations to
provide tailored information via
smartphone.

Everyone's connected.
Wireless connects remote rural areas and
urban hubs with growing population density.

Digital Government services.
Delivered via secure private networks for
education, public safety and human services.

Like you're really there.
Telepresence – HD video and audio
streaming to smartphones – is the norm.

Thanks mate!
No worries.

Keeping us safe.
Wireless positioning monitors high-risk
environments, triggers automatic responses to
danger.

No more phone numbers.
Save your memory – dial friends and family
by name.
